MUY IMPORTANTE

- Los pesos y las medidas indicados son modulares (aproximados) e incluyen las juntas entre ellos.
- **Debido a que las materias primas que componen estos productos son naturales, pueden haber diferencias de tono que no afectan a las características de la pieza.**
- Por su alto contenido de cemento, en algunos productos pueden aparecer microfisuraciones superficiales que no constituyen defecto alguno.
- A causa de una posible reacción química del cemento con el gas carbónico del aire y en determinadas condiciones atmosféricas, en algunos productos pueden aparecer eflorescencias ó carbonataciones que no alteran en ningún caso la calidad de los productos, no tratándose en ningún caso de un defecto de fabricación.
- En el caso de pavimentos y revestimientos, es aconsejable durante la colocación mezclar piezas de diferentes cajas ó palets ya que por estar fabricados con productos naturales pueden haber diferencias de tonalidades al estar fabricados en momentos distintos. Se deben colocar siempre con juntas de entre 2 a 10 mm según el producto.
- Para el mantenimiento, está totalmente prohibido utilizar productos de tipo ácido, disolventes agresivos u otros productos que deterioren el cemento. Es aconsejable para prever las infiltraciones de agua, el crecimiento de musgo y la penetración de manchas, la utilización de hidrófugos de superficie una vez terminada la obra.
- En piscinas de agua salada, dado el alto grado de corrosión de algunos de sus componentes, es necesario un correcto mantenimiento de las mismas para prevenir futuros deterioros en las piezas.
